

Injecting third party libraries: Prism.js

My blog posts make heavy use of [Prism.js](#) a syntax highlighter that makes

- markup
- css
- clike
- javascript
- apacheconf
- bash
- csharp
- ruby
- css-extras
- docker
- git
- go
- graphql
- handlebars
- java
- json
- markdown
- nginx
- perl
- php
- python
- typescript
- scss
- yaml

And the following plugins

- toolbar
- command-line
- keep-markup
- show-language
- copy-to-clipboard
