

# SVG: Conclusions (for now)

This series has barely began to scratch the surface of what you can do with SVG. As much SVG as we've covered, We've barely scratched the surface.

There are things like the GSAP library that I deliberately did not cover because I [wrote about it](#) before and because I don't want to push yet another third party library into my codebase.

The list below shows links to tutorials and examples of things that I've either used as inspiration or would like to play with at a later time.

If you have comments, criticisms or ideas for further projects, feel free to contact me on twitter at [elrond25](#).

I look forward to hearing from you :)
