Adding input formats: Markmap

[Markmap](#)

[markdown-it-markmap](#)

Output Formats

HTML Static Site

Building index of all available pages

Linking to other pages

PDF and PPT(X)

[Marp-core](#)

Packaging

Right now the project runs out of an index.js file and looks for gdocs under src for the files to convert.

Since we're adding functionality to the project, we might want to change the way the project is configured. Rather than having a single `index.js` file we might want to break the functionality into multiple files and leverage tools like
