

# Building a National Park Service app with Preact

A while back I got an API key for the National Park Service API. I was looking for an easy API to use that had enough features to make the design of the front end an interesting project.

The idea is to use Express as the back end and then use as simple a front-end and possible

```
https://developer.nps.gov/api/v1/parks/?api_key=<add your api key here>&q=
```
