

# Better docs with Sphinx.js

I've used [JSDoc](#) to document Javascript scripts and portions of larger projects. It's nice and it does a good job but it could do better. In JSDoc we can create tutorials and link to the tutorials from function description and viceversa.

I've dreamed for a while to have something like [Sphinx](#) from Python-land equivalent in Javascript. Now We have it!

[Sphinx-js](#) is a Javascript extension to the Sphinx
