

rm -rf node_modules && npm i && npm run build && git checkout – package-lock.json && npm run package-plugin

If you're using Gulp and Dust.js the code may look like this:

```
const gulp = require('gulp');
const dust = require('gulp-dust');

gulp.task('default', () =>
   gulp
    .src('templates/list.html')
   .pipe(dust())
   .pipe(gulp.dest('dist'))
);
```

And if you're using Nunjucks the Gulp task looks like this:

```
const gulp = require('gulp');
const nunjucks = require('gulp-nunjucks');

gulp.task('default', () =>
   gulp
        .src('templates/greeting.html')
        .pipe(nunjucks.compile({ name: 'Sindre' }))
        .pipe(gulp.dest('dist'))
);
```
