

## Looking at paged media: 2021 edition

I've documented my research on using CSS Paged media for PDF printed output in different posts:

- CSS paged media
- CSS paged media update
- Revisiting paged media stylesheets for the web

These stylesheets were designed to work with <a href="PrinceXML">PrinceXML</a> and <a href="AntennaHouse">AntennaHouse</a>. They are good tools but licensing them for unrestricted use may be pricier than what an open source project can afford. I wrote about them in <a href="Revisiting paged media">Revisiting paged media</a> stylesheets for the web and about using PrinceXML to generate PDF from Markdown in Generating HTML and PDF from Markdown

<u>Vivlio Style</u> seems like an interesting open source, GPL licensed, alternative to commercial libraries. As I suggest for every piece of GPL software, read the license and see if it matches the needs of your project.
