The Wakelock API: worth it?

The Wakelock API presents a way to to prevent devices from dimming or locking the screen when an application needs to keep running.

For example:

Applications like Art Space Tokyo would benefit from the browser not going to sleep while using maps to reach the different art spaces and museums discussed in the book.

Stay awake with the Screen Wake Lock API

```
if ('wakeLock' in navigator) {
  // Screen Wake Lock API supported 🎉
}
```
